

### LISTING OF THE CLAIMS

A detailed listing of claims is presented below. Please amend currently amended claims as indicated below including substituting clean versions for pending claims with the same number. In addition, clean text versions of pending claims not being currently amended that are under examination are also presented. It is understood that any claim presented in a clean version below has not been changed relative to the immediate prior version.

1. (Currently Amended) In an electronic device, a method of restoration comprising the steps of:

a) automatically extracting for restoring purposes from said electronic device information unique to said electronic device, wherein said information comprises critical operating parameters;

b) automatically creating a personality file;

c) automatically writing said information into said personality file; and

d) automatically storing said personality file on said electronic device.

2. (Original) The method as described in Claim 1 further comprising the step of:

e) transferring said personality file to a second electronic device.

3. (Original) The method as described in Claim 1, wherein said step a) further comprises the steps of:

automatically extracting state information unique to said electronic device, said state information configuring said electronic device for wireless communication.

4. (Original) The method as described in Claim 1, wherein said step d) further comprises the step of:

storing said personality file in a random access memory.

5. (Original) The method as described in Claim 1 further comprising the steps of:

e) automatically locating a plurality of files, including said personality file, stored within said electronic device containing said information, each of said plurality of files following a format unique to said method;

f) automatically displaying a list of said plurality of files;

g) automatically acknowledging selection of one of said plurality of files, a selected file; and

h) automatically importing data contained within said selected file into said electronic device.

6. (Original) The method as described in Claim 5, wherein said data comprises a plurality of pre-

determined operational parameters, each of which are stored in a corresponding pre-determined location within said electronic device and wherein said step h) further comprises the step of:

automatically importing each of said plurality of pre-determined operational parameters to said corresponding pre-determined locations.

7. (Original) The method as described in Claim 6, wherein said corresponding predetermined locations are located in flash read only memory.

8. (Currently Amended) The method as described in Claim ~~[[1]]~~5, wherein said format comprises a title format including a serial number of said electronic device and a time/date stamp, wherein said step e) further comprises the step of:

automatically locating said plurality of files following said title format.

9. (Original) The method as described in Claim 1, wherein said electronic device is a personal digital assistant with wireless capabilities.

10. (Original) The method as described in Claim 1, wherein said personality file is a memo file associated

with a memo application in an operating system of said electronic device.

11. (Currently Amended) In an electronic device, a method of restoration comprising the steps of:

a) automatically searching for a plurality of files contained within said electronic device, said plurality of files following a unique file format;

b) automatically displaying a list of said plurality of files;

c) automatically acknowledging selection of one of said plurality of files, a selected file; and

d) automatically importing data contained within said selected file into said electronic device for restoring radio calibration parameters for adjusting the frequency of wireless communication by said electronic device.

12. (Original) The method as described in Claim 11, wherein each of said plurality of files comprise personality data unique to a specific electronic device, at least one of which, said selected file, corresponds to said electronic device.

13. (Original) The method as described in Claim 12, wherein said personality data comprise critical operational parameters for configuring said electronic device for wireless capabilities.

14. (Original) The method as described in Claim 12, wherein said personality data comprises a plurality of pre-determined operational parameters, each of which are stored in a corresponding pre-determined location within said electronic device, wherein said step d) further comprises the step of:

automatically importing each of said plurality of pre-determined operational parameters to said corresponding pre-determined locations.

15. (Original) The method as described in Claim 11, wherein said step c) further comprises the step of:

acknowledging selection of said selected file by a user.

16. (Original) The method as described in Claim 11 further comprising the steps of:

1i) prior to said step a), automatically extracting said personality data unique to said electronic device;

2i) automatically creating a personality file;

3i) automatically writing said personality data into said personality file; and

4i) automatically storing said personality file on said electronic device, said personality file also said selected file.

17. (Original) The method as described in Claim 16 further comprising the step of:

5i) prior to said step a), transferring said personality file to a second electronic device.

18. (Original) The method as described in Claim 17, wherein said step 5i) further comprises the step of:

transferring said personality file via a synchronization process with said second electronic device.

19. (Original) The method as described in Claim 17 further comprising the steps of:

6i) prior to said step a) locating said personality file on said second electronic device; and

7i) storing a copy of said personality file on said electronic device.

20. (Original) The method as described in Claim 11, wherein said file format comprises a title format including a serial number of said electronic device and a time/date stamp, wherein said step a) further comprises:

automatically searching for said plurality of files following said title format.

21. (Original) The method as described in Claim 11, wherein said electronic device is a personal digital assistant with wireless capabilities.

22. (Currently Amended) A computer system comprising:  
a bus;  
a processor coupled to said bus,  
a memory unit coupled to said bus, wherein said memory unit contains instructions that when executed implement a method of restoration comprising the steps of:

- a) automatically extracting for restoring purposes from said electronic device information unique to said electronic device, wherein said information comprises critical operating parameters;
- b) automatically creating a personality file;
- c) automatically writing said information into said personality file; and
- d) automatically storing said personality file on said electronic device.

23. (Original) The computer system as described in Claim 22, wherein said method further comprises the step of:

- e) transferring said personality file to a second electronic device.

24. (Original) The computer system as described in Claim 22, wherein said step a) in said method further comprises the steps of:

automatically extracting state information unique to said electronic device, said state information configuring said electronic device for wireless communication.

25. (Original) The computer system as described in Claim 22, wherein said step d) in said method further comprises the step of:

storing said personality file in a random access memory.

26. (Original) The computer system as described in Claim 22, wherein said method further comprises the steps of:

e) automatically locating a plurality of files, including said personality file, stored within said electronic device containing said information, each of said plurality of files following a format unique to said method;

f) automatically displaying a list of said plurality of files;

g) automatically acknowledging selection of one of said plurality of files, a selected file; and

h) automatically importing data contained within said selected file into said electronic device.

27. (Original) The computer system as described in Claim 26, wherein in said method said data comprises a

plurality of pre-determined operational parameters, each of which are stored in a corresponding pre-determined location within said electronic device and wherein said step h) further comprises the step of:

automatically importing each of said plurality of pre-determined operational parameters to said corresponding pre-determined locations.

28. (Original) The computer system as described in Claim 27, wherein in said method said corresponding predetermined locations are located in flash read only memory.

29. (Currently Amended) The computer system as described in Claim 26[[22]], wherein in said method said format comprises a title format including a serial number of said electronic device and a time/date stamp, wherein said step e) further comprises the step of:

automatically locating said plurality of files following said title format.

30. (Original) The computer system as described in Claim 22, wherein in said method said electronic device is a personal digital assistant with wireless capabilities.

31. (Original) The computer system as described in Claim 22, wherein in said method said personality file is a

memo file associated with a memo application in an  
operating system of said electronic device.
